A perfect solution for communication needs

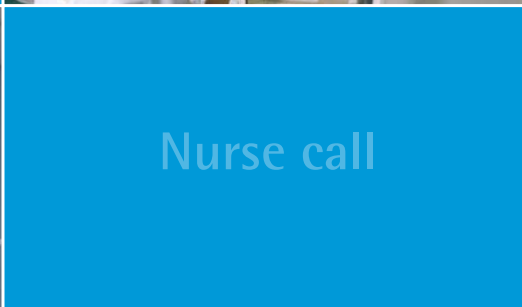

The TEPO+ communication solution, developed by Teletalo Oy, based on digital, ultrasound and RFID technology, is a cost-effective and resource-saving solution increasing the efficiency of carework for the modern-day hospital. The TEPO+ system allows You to monitor operations and events in a hospital ward. The system forwards nurse calls and alarms, acts as a telephone and paging system, is linked to Your data system, and ensures personal safety. A variety of customized solutions, required particularly in Your work, can be included in the system.

In the future you can easily supplement and modify Your TEPO+ system to meet changing needs.

The new patient terminal increases safety and comfort!

The new patient terminal of the TEPO+ communication system is easy to use, is ergonomically excellent, has a clear design and meets high standards of hygiene. The terminal can be equipped with functions enabling listening to music, radio, and television.

Telephone system
